

# AIRLINE RESERVATION SYSTEM

# Objective :

- ▶ The **objective** of an **Airline Reservation System** built using PHP is to provide an automated, user-friendly interface for customers and administrators to manage flight bookings efficiently. The system aims to simplify and streamline the process of searching for flights, making reservations, and managing bookings, while also offering an administrative interface to manage flights, view statistics, and handle user data.

# Admin Panel :

- ▶ Flight schedule management
- ▶ Booking management
- ▶ User management
- ▶ Analytic and report

# Client panel :

- ▶ User registration and login
- ▶ Flight search
- ▶ Flight booking
- ▶ Booking management
- ▶ Payment gateway integration

# Technology

## ► Technology

HTML,CSS

Java script

Bootstrap

## ► Backend

php

## ► Database

mysql

## Difficulty levels:

- ▶ User authentication, simple flight search
- ▶ Complete booking process, basic admin function and payment handling

## Conclusion :

- ▶ An airline reservation project is an excellent way to enhance skill in php, database and web development start with a minimal functionality and iteratively add features.

THANK YOU!
